Starting from the beginning, the first line of the code. Don't forget to include reg51.h header file to your every project that contains an 8051 (89c51,89c52) microcontroller in it. This header file is very important. Keil compiler checks this header file in your code first.

It is very easy to use and together with an 8051 family assembler, such as the one above, it provides a very low-cost 8051 development system. PAULMON is in the public domain. You may use pie-

ces of the code in your own programs and even incorporate the code into your own commercial products, if you wish. Download PAULMON2 Source or Object Code. Nearly everything is improved and several new features have been added... generally much better than version 1, even in the beta versions.
