Organizational Change and Global Standardization: Solutions to Standards and Norms Overwhelming Organizations takes an organizational change approach to the overflow of standards and norms, looking at how to deal effectively and ethically with four kinds of standards and norms businesses face when they go global: (1) accounting & finance (2) international & world trade,(3) social and (4) safety & quality & environment. It is part of a larger problem faced by not only business, but every sort of organization - how to live with the epidemic of standards and norms, often in conflict, many just unnecessary, and a few that are quite helpful and important. There are good reasons to have International Standards Organization (ISO), International Labor Organization (ILO), World Trade Organization (WTO), North Atlantic Treaty Association (NAFTA), International accounting Standards Boards (IASB), International Financial Reporting Standards (IFRS)), and many more standard-setting organizations issuing, auditing, proposing codes of ethics, and certifying standards and norms. However, there are important, poorly understood organizational change consequences to the contagion of standards and norms. This volume brings together a unique group of authors who are working on a pragmatic way for organizations to deal with an overflow of standards and norms that are often at heads, ambiguous, or simply created to produce more work for a burgeoning standards setting industry. The aim of Organizational Change and Global Standardization is to stimulate a critical analysis within the framework of analytical and pragmatic approach to an overwhelming bureaucratization of the managed and organized global activities.

As business and capital markets have continue to grow more global over recent years, the need for cross-border financial information has correspondingly increased. This has brought international accounting to the forefront. International Accounting: A User Perspective is designed to provide an understanding of international accounting issues to current and future business managers. The book takes a user perspective to international financial reporting because most business executives are more likely to be users of financial information that crosses national borders than users of it. With the recent problems exposed in the quality of financial reporting in many countries, a solid understanding of international accounting issues is an important part of the portfolio of skills that managers in medium and large enterprises must possess.

A single global accounting language surely must be the aim of the accounting profession in its bid to support the global economy and markets. However, there are a number of practical and political issues which may hinder this process. This report addresses one of these issues - that of translation. This report takes a European perspective: to identify specific issues which arise in the translation of accounting terminology; to explore the implications of these issues; and to make recommendations for stakeholders in IFRS adoption and translation. The authors find that although translation is possible, direct equivalence cannot be achieved. Translation problems can arise because of differences in accounting systems and language structures. Problems are likely to differ between different language families. A major problem is that meanings between different languages do not exactly overlap. These findings give rise to six policy implica-

tions for consideration by the profession.

The International Financial Reporting Standards are quite different from other sets of accounting standards, and are fundamentally different from US-GAAP, in that they are based on principles, and not on detailed rules. Financial Reporting under IFRS: A topic-based approach offers a global perspective on IFRS by presenting the prescribed rationale and principles and illustrating them through numerous examples from large international companies. It aims to develop the fundamental skills necessary to read and use the information contained in all types of financial statements, through examples, activities, questions and answers. The book is broadly divided into three sections. Section one examines the structure of the Balance Sheet and the Income Statement, their links and the accounting mechanisms used to prepare them. Section two deals with the identification, evaluation and reporting of Balance Sheet items. Section three covers the use of financial statements to analyze a firm's performance and its risks. Throughout the book special topics are covered, including Derivatives and Hedge accounting (IAS 39), Business Combination (IFRS 3) and Operating Segments (IFRS 8). Financial Reporting under IFRS is ideally suited to the needs of students of accounting and financial reporting, but all users of financial statements, from creditors and investors to suppliers, customers, employees and governments will benefit from its concise, topic-based approach.

Intermediate Accounting: IFRS Edition provides the tools global accounting students need to understand IFRS and how it is applied in practice. The emphasis on fair value, the proper accounting for financial instruments, and the new developments related to leasing, revenue recognition, and financial statement presentation are examined in light of current practice. Global Accounting Insights highlight the important differences that remain between IFRS and U.S. GAAP, and discuss the ongoing joint convergence efforts to resolve them. Comprehensive, up-to-date, and accurate, Intermediate Accounting: IFRS Edition includes proven pedagogical tools, designed to help students learn more effectively and to answer the changing needs of this course.

Financial reporting practices differ widely between countries and this has far-reaching implications for multinational businesses. Over more than a century, there have been attempts to classify countries into groups by similarities of practices. With the recent spread of International Financial Reporting Standards, it might appear that classification is largely of historical interest, but this is not the case, for several reasons explained in this book. Christopher Nobes offers a critical analysis of the

many previous accounting classifications, having drawn lessons from other fields of science and social science. Revised and updated to reflect the IFRS era, the book discusses how old classifications are reflected in today's international differences in practice under IFRS. It concludes with a discussion on the most useful classifications, and how classifications can still be relevant in the era of international standards. This book will be essential for academics, post-graduates and undergraduates in international accounting, accounting theory and to international accounting professionals.
