"From the author of The Science of Monsters, this engaging scientific inquiry provides a definitive look into the elements of mystical places and magical objects—from the philosopher's stone, to love potions to the oracles—from ancient history, mythology, and contemporary culture. Can migrations of birds foretell our future? Do phases of the moon hold sway over our lives? Are there sacred springs that cure the ill? What is the best way to brew a love potion? How do we create mutant humans who regenerate like Wolverine? In Science of the Magical, noted science journalist Matt Kaplan plumbs the rich, lively, and surprising history of the magical objects, places, and rituals that infuse ancient and contemporary myth. Like Ken Jennings and Mary Roach, Kaplan serves as a friendly armchair guide to the world of the supernatural. From the strengthening powers of Viking mead, to the super soldiers in movies like Captain America, Kaplan ranges across cultures and time periods to point out that there is often much more to these enduring magical narratives than mere fantasy. Informative and entertaining, Science of the Magical explores our world through the compelling scope of natural and human history and cutting-edge science."--

A book of candle spells can often fall under the traditional category of A Book of Shadows, which is a book that comprises of religious texts and instructions meant to educate people in the way of magical rituals that is bounded to the Neopagan religion of Wicca. One of the great benefits to this is that its simple nature ensures that you wouldn't need a lot of fancy ritual and ceremonial apparatus in order to cast your spell. All you need is a candle if you want to cast a spell. It is similar to how one would wish something while blowing out the candles on their birthday cake. Chance Favors Only the Prepared Mind How does a scientist go about the task of pushing back the curtains of the unknown? Certainly the romance of tackling the mysteries of nature provides the motivation, for who would not be inspired by the remarkable life history of this romantic beast, the salmon. After living in the Pacific Ocean for several years, salmon swim thousands of kilometers back to the stream of their birth to spawn. I have always been fascinated by the homing migration of salmon. No one who has seen a 20-kilogram salmon fling itself into the air repeatedly until it is exhausted in a vain effort to surmount a waterfall can fail to marvel at the strength of the instinct that draws the salmon upriver to the stream where it was born. But how does it find its way back? I was puzzling over this problem during a family vacation in 1946. Inspired by the work of the great German Nobel Laureates, Karl von Frisch and Konrad Lorenz, I had been conducting research with my graduate student Theodore Walker, since 1945, on the ability of fishes to discriminate odors emanating from aquatic plants. Von Frisch had studied schooling minnows and discovered that, if broken, their skin emitted a con specific chemical substance, termed Schreckstoff, which caused other members of its school to disperse and hide.
