## D49 - RILEY LEWIS

---

The Minnesota Sustainable Design Guide provides 42 strategies that are organized according to six environmental design topics--site, water, energy, indoor environmental quality, materials, and waste. Each topic contains a series of design strategies that address the related sustainable design issues.

In addition to including sustainable design concepts in new construction, sustainable design advocates commonly encourage retrofitting existing buildings rather than building anew. Retrofitting an existing building can often be more cost-effective than building a new facility. Designing major renovations and retrofits for existing buildings to include sustainable design attributes reduces operation costs and environmental impacts, and can increase building resiliency.

Issues evolving from PUD, such as setbacks and road widths, as well as the introduction of a natural wetland system, required the design team to rewrite codes for approval. The design team's efforts received the support of both the Department of Natural Resources (DNR) and the Minnesota Office of Environmental Assistance (MNOEA).
