In one state, 52% of the voters are Republicans, and 48% are Democrats. In a second state, 47% of the voters are Republicans, and 53% are Democrats. Suppose a simple random sample of 100 voters are surveyed from each state. What is the probability that the survey will show a greater percentage of ...

Exercises in Statistical Inference with detailed solutions 8 Introduction 1 Introduction 1.1 Purpose of this book The book is designed for students in statistics at the master level. It focuses on problem solving in the field of statistical inference and should be regarded as a complement to text books such as Wackerly et al

Statistical inference is a process of drawing general conclusions from data in a specific sample. Typical inferential problems are: Does alternative A give higher return than alternative B? Is drug A more effective than drug B? In both cases solutions are based on observations in a single sample.

Some statistical inference solution facts are: It is a common way to assume that the observed sample is independent observations from a population type like Poisson or normal. Statistical inference solution is used to evaluate the parameter (s) of the expected model like normal mean or binomial ...

Solution: Because time is sequential: subsequent observations are closely related to each other. (LC2.13) Plot a time series of a variable other than temp for Newark Airport in the first 15 days of January 2013. Solution: Humidity is a good one to look at, since this very closely related to the cycles of a day.

The central tool for various statistical inference techniques is the likelihood method. Below we present a simple introduction to it using the Poisson model for radioactive decay. 1.2.1 Probability vs. likelihood. In the introduced Poisson model for a given  $\lambda$ , say  $\lambda = 2$ , we can observe a function
