An assessment and reevaluation of nihilism's ascendancy over metaphysics. Challenging the idea that nihilism has supplanted metaphysics, Vittorio Possenti finds in this philosophical turn the grounds for a mature renewal of metaphysics. Possenti takes the reader on a "third voyage" that goes beyond the "second voyage" indicated by Plato in the *Phaedo*. He traces the ascendancy of nihilism in

philosophy, offering critical examinations of Nietzsche, Gentile, Heidegger, Habermas, Husserl, Gadamer, Ricoeur, and Vattimo. With penetrating accounts of philosophical movements such as hermeneutics and logical empiricism, rich with both historical and theoretical insights, Possenti provides a compelling defense of the power of human reason to apprehend the most obvious but also the most profound aspect of things: that they exist. By exploring the ubiquity of nihilism and probing its philosophical roots, Possenti clears the way for a fresh reformulation of metaphysics.

This introduction provides a clear framework for understanding and analyzing securities, and covers the major institutional features and theories of investing. While the book presents a thorough discussion of investments, the authors keep the material practical, relevant, and easy to understand. The latest developments in investments are brought to life through the use of tables, graphs, and illustrations that incorporate current market information and academic research. An international content deals directly with international securities and securities markets throughout the book—along with currency management and interest rate parity. Up-to-date "Money Matters" articles reflect the latest real-world developments and are provided

throughout each chapter to give readers a sense of how practitioners deal with various investment issues and use techniques. Other coverage includes an array of investment tools—presented through discussions on stocks, bonds, and other securities such as options and futures. A guide to reviewing, forecasting, and monitoring—for individuals preparing to make investments or take the CFA exam.

The focus of this volume is the crisis of the traditional view of the relationship between words and

things and the emergence of linguistic arbitrariness in 17th-century British philosophy. Different groups of sources are explored: philological and antiquarian writings, pedagogical treatises, debates on the respective merits of the liberal and mechanical arts, essays on cryptography and the art of gestures, polemical pamphlets on university reform, universal language scheme, and philosophical analyses of the conduct of the understanding. In the late 17th-century the philosophy of mind discards both the correspondence of predicamental series to

reality and the archetypal metaphysics underpinning it. This is a turning point in semantic theory: language is conceived as the social construction of historical-conventional objects through signs and the study of strategies we use to bridge the gap between the privacy of experience and the publicness of speech emerges as one of the main topics in the philosophy of language.
